EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Carl R. Wesolowski, Reg. No. 40,372 on January 25, 2006.

2. The application has been amended as follows:

In the claim: Please amend claims 8 and 21 as follow:

8. A computer, comprising:
 - a CPU that processes;
 - a first controller coupled to the CPU via a data bus, and configured to provide a throttled clock to the data bus according to a throttle rate;
 - a clock generator coupled to the CPU and the first controller, and configured to generate a clock for the CPU and the first controller;
 - a detector detecting a variable, wherein the variable is a remaining battery capacity or a load of the CPU; and
 - a second controller coupled to receive the detected variable, configured to determine the throttle rate according to the detected variable, and further configured to output the throttle rate to the first controller, wherein the throttled clock is configured to selectively have a different independent value than the clock supplied to the first controller and the clock supplied to the second controller.

Art Unit: 2116

21. A bus clock controlling method in a computer, comprising
setting a throttle rate of a clock to a predetermined initial value, the clock
configured to set a speed of a data bus to which both a controlling device and a peripheral
device are connected;
detecting one member chosen from a present load of the CPU and a
remaining battery capacity; and
adjusting the set throttle rate by the controlling device in reverse relation to the
detected one of the present CPU load and the remaining battery capacity, wherein the set
throttle rate is adjusted when the controlling device is providing the clock to the data bus
between the controlling device and the peripheral device.
